Extended Data Fig. 2 Country drivers of cross-reanalysis disagreement in the fitted BHM dose-response (absolute units)

(a) Per-pair country influence on cross-reanalysis disagreement [uniform, absolute L1]

(b) Combined map: mean across the 6 reanalysis pairs (max observed = 0.0002)

Absolute reduction in L1 distance when country dropped (L1 units, uniform weighting; positive only; grey = drives agreement or no data)
